COMPLETE INFORMATION GUIDE

CIENCIA LIFE SCIENCES

Organisation profile, research and training services, course outlines, facilities, intellectual-property support, registration and contact information.

Hyderabad, India

Prepared 15 October 2026 from the Ciencia Life Sciences website pages in this workspace. Consolidated reference; confirm schedules, fees, availability, and legal or commercial scope directly with Ciencia.

Contents

1. Executive overview
2. Organisation and approach
3. Leadership and scientific advisors
4. Who Ciencia serves
5. Research projects and subject areas
6. Research services and laboratory techniques
7. Bioinformatics and cheminformatics
8. Training programmes and curriculum detail
9. Scientific writing support
10. API Pharma intellectual-property services
11. Laboratory facilities
12. Registration and enquiry process
13. Careers
14. Contact, location, hours and online channels
15. Website notices, discrepancies and verification notes
16. Source pages

> **Important reading note.** This guide consolidates information published on the website. Some training details and prices come from older static course tabs, and some notices are dated 2025 or earlier. They are reproduced as website-listed information, not confirmation of current availability. The current homepage announces a 2027 summer internship but does not publish its dates or updated terms.

1. Executive Overview

Ciencia Life Sciences describes itself as an integrated life-sciences research and training organisation based in Hyderabad. Its published work spans practical and academic project support, laboratory and computational research, professional training, bioinformatics and cheminformatics, scientific writing, and API Pharma intellectual-property services.

The organisation presents its purpose as helping students, researchers, academics, and life-science, biotechnology, and pharmaceutical organisations access qualified training, research assistance, consulting, and research outsourcing. Classroom and online formats are described for training and project support.

Organisation	Ciencia Life Sciences; the site also identifies Ciencia Labs LLP in founder and career material.
Location	Sardarpatel Nagar, Nizampet X Roads, Kukatpally, Hyderabad, India 500085.
Core areas	Research projects; lab and computational methods; training; bioinformatics; cheminformatics/CADD; research analysis; scientific writing; API Pharma IP.
Formats	Classroom and online training are listed. Research project and service arrangements should be discussed with the team.
Homepage promotion	“2027 SUMMER INTERNSHIP” appears on the homepage with links to certification and laboratory syllabi. No 2027 start date, duration, batch size, or fee is stated in that banner.

2. Organisation and Approach

The About page says Ciencia was started by PhD holders with research backgrounds who observed demand for an integrated service provider for fast-growing life-sciences and biotechnology companies and academics. Its stated motto is to provide research training from qualified professionals alongside integrated consulting and research outsourcing.

The site describes Ciencia as a bioinformatics training organisation in Hyderabad. It lists advanced training, short courses, summer projects, and Bio-IT courses such as BioPerl and Python in classroom and online formats. Research support includes project data analysis and help preparing projects for funding agencies and publications. Clinical-trial and pharmaceutical research support is described as using cheminformatics tools.

Stated working principles

- Qualified professionals and doctoral faculty are emphasized in training and research guidance.
- Hands-on instrument experience and practical exposure to protocols are emphasized for students.
- Data-analysis and research-support teams are described as assisting throughout project stages, with outputs and progress reporting mentioned on the Research Services page.
- The organisation states that client information and research work are kept confidential and not shared with other persons or companies.
- Training and project curricula may be adjusted to a candidate’s eligibility, according to the course pages.

Confidentiality, quality, timeline, and outcome statements above are descriptions made by the organisation on its website; service terms should be agreed in writing for each engagement.

3. Leadership and Scientific Advisors

Dr. Sabitha Yadam

The site identifies Dr. Sabitha Yadam as CEO and Research Head at Ciencia Labs LLP, Hyderabad. Her listed previous roles include Research Head at Ciencia Life Sciences, Assistant Professor at JNIAS, and Research Associate at Indo-American Cancer Hospital and Mahavir Hospital. Her stated areas of expertise include drug design, cheminformatics, pharmacogenomics, molecular biology, probiotics, nanotechnology, and AI-driven drug discovery.

The profile says she has contributed patents, publications, and conference presentations; guided more than 500 students; and organised national conferences and workshops. It states that she earned a Ph.D. in Biotechnology from JNTU, Hyderabad, with doctoral research focused on molecular mechanisms and oxidative stress in smokers with head and neck squamous cell carcinoma. Listed computational skills include molecular docking, QSAR, and computational drug design.

Advisory board biographies as published

Advisor	Published affiliation and subject profile
Dr. Kaiser Jamil	Described as a scientist in biotechnology, cancer biology, pharmacogenomics, and toxicogenomics. The site lists Dean and Director of the School of Life Sciences at JNIAS and Emeritus Research Scientist and Head of Genetics at Bhagwan Mahavir Medical Research Centre, Hyderabad. Previous positions include CSIR-IICT, CCMB, and Indo-American Cancer Institute. The site states more than 295 papers, books, Ph.D. supervision, awards, and research interests in cancer biomarkers, SNP analysis, drug–gene interactions, and environmental genotoxicity.
Dr. Vishnu Vardhan Reddy Martha	Described as Professor in Otolaryngology–Head and Neck Surgery at Malla Reddy Institute of Medical Sciences, Hyderabad, and Adjunct Professor at Drexel University College of Medicine, USA. Areas include head and neck surgery, audiology, voice disorders, deafness, head and neck cancers, and laryngeal disorders.
Dr. A. Uma	Described as Associate Professor at the Centre for Biotechnology, Institute of Science and Technology, JNTU Hyderabad. Areas include biochemistry, biotechnology, biofuels, enzyme engineering, metabolic studies, and bioethanol production. The site lists projects funded by DST, DBT, AICTE, and CSIR, and publications, patents, workshops, and conferences.
Dr. Rambabu Gundla	Described as Professor of Chemistry at GITAM University, Hyderabad, with work in biologically active compounds and computer-aided drug design. The site states a Ph.D. from Osmania University, postdoctoral research at the University of Southern California, more than 106 publications, 16 patents, and work in SAR, QSAR, docking, and virtual screening.
Dr. N. K. Katari	Described as Assistant Professor of Chemistry at GITAM Deemed to be University, Hyderabad. Areas include analytical and organic chemistry, Quality by Design method development, risk analysis, green analytical tools, drug analysis, impurity profiling, chromatography, spectroscopy, and pharmaceutical formulations. The site states 185 papers, 20 patents, over 16 years of research and 12 years of teaching experience, international exposure, student guidance, and awards.

Affiliations and counts are transcribed from the site biographies and may change; verify directly before publication or formal use.

4. Who Ciencia Serves

- **Undergraduate and postgraduate students:** life-sciences training, academic projects, laboratory exposure, internships, certificates, thesis/report support, and computational projects.
- **Ph.D. scholars and researchers:** experimental and computational research assistance, analysis, biostatistics, publications, project proposals, and troubleshooting.
- **Faculty and academics:** research methods, funding proposal support, data interpretation, and scientific documentation.
- **Pharma, biotech, and life-science organisations:** research support, cheminformatics, docking, virtual screening, IP searches and reports, and consulting or outsourcing.
- **Medical practitioners and clinical researchers:** the Research Services page lists physician and medical-practitioner research support and clinical research assistance.
- **Job applicants:** the careers page invites speculative applications from candidates with a master's degree in life sciences and relevant qualifications/experience.

5. Research Projects and Subject Areas

The Projects page describes hands-on instrument and protocol exposure; methodology training; biostatistics support; thesis and project-report assistance; and guidance and progress reviews during project work. The homepage says academic projects are available to undergraduate and postgraduate students and mentions publication-oriented projects.

Project durations listed on the homepage

Three months, six months, and one year are mentioned for academic projects. These are general homepage statements and should not be interpreted as guaranteed current openings or fixed programme lengths.

Project subjects listed

- Microbiology
- Biochemistry and clinical biochemistry
- Biotechnology and vaccine biotechnology
- Molecular biology
- Bioinformatics and big data in bioinformatics
- Virology
- Clinical and medical microbiology
- Biomarkers
- Cheminformatics (the site also uses the spelling “Chemiinformatics” in places)
- Molecular dynamics and simulations
- Proteomics and genomics
- Molecular docking
- Genetic engineering and DNA technology
- Cancer biology and oncology
- Personalized medicine
- Immunology and immunoinformatics
- Pharmacogenomics
- Drug design
- Virtual screening
- Nanotechnology
- Food microbiology/technology
- Agricultural microbiology

Selected subject descriptions and themes

- **Microbiology:** microorganisms, bacteriology, virology, mycology, parasitology, culture and identification methods, fermentation, antibiotic production, bioremediation, and microbiome topics.
- **Biochemistry:** chemical processes in living systems; proteins, carbohydrates, lipids, nucleic acids, metabolic pathways, cellular processes, enzymology, genetics, cell biology, and animal/plant biochemistry.
- **Immunology/immunotechnology:** immune-system physiology, innate and adaptive immunity, immune disorders, clinical, developmental, diagnostic, cancer, reproductive and theoretical immunology, and immunotherapy.
- **Immunoinformatics:** computational analysis of immune molecules and immunogenicity, including T-cell and B-cell epitopes, MHC binding, and antigen structure modelling.
- **Bioinformatics:** sequence analysis and assembly, genome annotation, comparative and evolutionary genomics, mutation analysis, gene/protein expression, regulation, literature analysis, biological databases, and molecular modelling.
- **Cheminformatics:** computational handling and analysis of chemical information, compound databases, information retrieval/extraction, data mining, molecule mining, and drug-lead discovery and optimisation.
- **Virtual screening and docking:** computational prioritisation of compounds and prediction of ligand–target binding orientation; the site also lists QSAR and virtual-library concepts.
- **Genetic engineering/DNA technology:** genome modification, gene insertion or deletion, cloning concepts, primer design, PCR, restriction digestion, and related laboratory work.

- **Nanotechnology:** the topic list includes nanomaterials, biomedical and diagnostic applications, drug/gene delivery, imaging, and green nanotechnology.

6. Research Services and Laboratory Techniques

The Research Services page says Ciencia supports researchers through data analysis, project and funding-application support, publication assistance, clinical-trial and pharmaceutical research support, and help selecting bioinformatics tools and designing analysis approaches. It mentions regular progress reports and delivery of generated output files. The page describes ad-hoc work, primary research capability, and support spanning data review/analysis through wet-lab research.

Research services explicitly listed

- Ph.D. project assistance
- Academic project assistance
- Bioinformatics assistance
- Publication assistance
- Patent search
- Database creation
- Web mining
- Data analysis
- Research for physicians and medical practitioners
- Clinical-trial and pharma research support
- Cheminformatics support, including docking, virtual screening, and pharmacophore generation
- Biostatistics and experimental-design discussion

Techniques listed on the Research Services page

- Enzyme optimisation from various sources
- Identification of novel microorganisms, from biochemical testing to sequencing
- Polymerase chain reaction (PCR)
- Biomarker identification in diseases
- Antioxidant estimation
- Comet assay
- Karyotyping
- Cytotoxicity assays
- TUNEL assay (spelled “Tunnel assay” on the site)
- Plant-extraction studies
- MTT assay
- Biochemical testing
- Cell-line studies
- Protein isolation
- Fermentation techniques
- Micronucleus assay
- Antimicrobial activity
- Phytochemical extraction from medicinal plants
- Polyacrylamide gel electrophoresis
- HPLC
- DNA isolation from various sources
- Toxicology

> **Confidentiality:** the site states that information provided by service users is securely maintained and that work is not shared with other persons or companies. Confirm the exact confidentiality, data-handling, and deliverable terms for a proposed engagement.

7. Bioinformatics and Cheminformatics

Ciencia lists training, projects, and research support in biological databases, genomics, proteomics, sequence analysis, molecular modelling, ligand screening, docking, ADMET prediction, and computer-aided drug design (CADD). The site promotes classroom and online formats and practical exposure using tools and databases.

Bioinformatics topics listed

- Biological data, data retrieval, and biological databases: nucleotide, protein-sequence, domain, and structure resources; examples include GenBank, EMBL, DDBJ, UniProt, PDB, NDB, MMDB, SCOP, CATH, KEGG, and related resources.
- Sequence alignment and database searching: pairwise and multiple alignment; local/global alignment; BLAST, FASTA, PSI-BLAST, and ClustalW; scoring matrices such as PAM and BLOSUM.
- Gene prediction, functional analysis, ORF finding, primer design, ESTs, gene discovery, and restriction-site detection.
- DNA/RNA secondary-structure prediction; protein homology modelling, threading, structure/function sites, binding-site analysis, and model validation.
- Phylogenetics, genetic algorithms, computational biology algorithms, genomics, proteomics, and sequence/structure interpretation.
- Programming and computational foundations appearing in the syllabus: C, C++, Python, Biopython, BioPerl, R, Oracle, Unix/Linux.

Cheminformatics, molecular modelling, and CADD topics listed

- Chemical structure formats, sketching, viewing, and conversion; examples listed include ChemDraw, ChemSketch, Marvin, Ketcher, Chimera, PyMOL, OpenBabel, and other viewers.
- Compound and biological databases; small-molecule library preparation; compound properties and drug-likeness, including Lipinski-rule concepts.
- Molecular mechanics and quantum chemistry concepts: force fields, energy expressions and minimisation, local/global minima, molecular geometry, conformational search, semi-empirical methods, and molecular dynamics.
- Protein target preparation, sequence/structure analysis, homology modelling, threading, active/binding-site analysis, and model refinement.
- Molecular docking, scoring, interaction analysis, fragment-based docking, and selection of compounds for biological screening.
- Pharmacophore generation (structure- and ligand-based), similarity/substructure screening, virtual screening, and virtual-library design.
- ADME/ADMET prediction, QSAR and quantitative structure–property relationships, molecular descriptors, model generation and validation, SAR, and drug-discovery workflows.
- The syllabus mentions AI and machine-learning applications in drug discovery/design.

Immunoinformatics topics listed

- Immunological databases, including MHC, T-cell epitope, and B-cell epitope resources.
- Antibody homology modelling.
- Prediction of MHC class I cytotoxic T-cell epitopes and MHC class II helper T-cell epitopes.
- B-cell epitope prediction, antigen recognition, and computational vaccine-design resources.

- In-silico immunogenicity work: T-cell epitope prediction from primary sequences, MHC peptide-binding prediction, linear versus conformational B-cell epitope prediction, and antigen structure prediction via homology modelling.

8. Training Programmes and Curriculum Detail

The website describes professional life-sciences training for students and professionals, intended to build research knowledge and practical capability. It lists classroom, online, weekend, short-course, internship, project-based, and Bio-IT formats in different places. The current training page does not provide a single definitive schedule for every programme.

Training subject list

Microbiology; molecular biology; bioinformatics; immunoinformatics; cheminformatics; analytical chemistry; genomics and proteomics; docking; genetic engineering; drug design; virtual screening; biomarkers; R programming; computational-aided drug design; biotechnology; immunology; biochemistry; and food microbiology are named across the training, registration, and syllabus pages.

Laboratory and life-sciences training modules

Area	Published learning/practical topics
Basic microbiology	15-day duration in an older course tab; sterilisation of plates, chemicals, glassware and surfaces; preparation of solid/liquid media; plating, inoculation and pure-culture isolation; bacterial isolation from soil, water and air; spore and flagella staining; bacterial growth curves; bacteriophage detection; microorganism identification by staining; bacterial/yeast organelle staining; motility testing.
Advanced microbiology	Three-week duration in an older course tab; culture-media selection; biochemical identification; antibiotic susceptibility/MIC; antibiotic synergy; cell fractionation; osmosis and pinocytosis; 16S rDNA typing.
Molecular biology	Theory in DNA isolation, primer design using bioinformatics tools, and PCR types/introduction. Practical list: DNA extraction from human blood, bacteria, and chicken liver; plasmid isolation; primer design; PCR-parameter optimisation; PCR.
Genetic engineering	Theory: DNA isolation, bioinformatics-assisted primer design, PCR, genetic engineering, and restriction digestion. Practical list adds DNA extraction from human blood, bacteria and chicken liver; plasmid isolation; PCR optimisation; PCR; cloning using a HiMedia kit.
Biomarkers	Theory: DNA isolation, biomarker-finding concepts, primer design, and PCR. Practical: DNA extraction from human blood and chicken liver, primer design, PCR optimisation, PCR, and statistical analysis.
Analytical chemistry	15- or 30-day duration listed in a course tab; six theory seminars on method development and validation; project examples include RP-HPLC assay method development/validation, impurity methods, and UV spectrophotometric API quantification and validation.
Genomics/proteomics laboratory	Internet and sequence resources (NCBI, EMBL, GenBank); PDB/SCOP/CATH; pairwise and multiple alignments; BLAST/FASTA; gene prediction; primer design; restriction-site detection; protein visualisation; Ramachandran phi/psi analysis; homology modelling and validation; secondary/tertiary structure analysis; phylogenetics; molecular docking.
Biochemistry laboratory	Thin-layer and column chromatography; enzyme estimation; qualitative/quantitative protein and enzyme analysis; UV spectrophotometry and colorimetry; pH optimisation; SDS-PAGE; protein purification; standard curves; agarose gel electrophoresis; ELISA reader; IC50 calculations for binding assays.

Area	Published learning/practical topics
Summer PCR training	The homepage describes a one-week hands-on PCR programme covering nucleic-acid extraction, conventional PCR, agarose gel electrophoresis, result interpretation, and applications.

R programming curriculum listed

- R and RStudio introduction, installation, and configuration
- Data types: integer, character, logical, numeric
- Vectors, matrices, arrays, data frames, lists, and working directories
- Built-in inspection and summary functions
- Creating, modifying, deleting, indexing, and searching data structures
- Conditionals and loops
- Numeric functions: max, min, mean, median, standard deviation, variance, square root, logarithm
- Vector functions: sequence, repetition, paste, sorting, ordering, sampling
- Strings, regular expressions, pattern matching, substitution, splitting, custom functions
- Reading/writing TSV, CSV, and Excel files; clipboard concepts
- Set operations, joins, apply/lapply/sapply, contingency tables
- Plots: scatter, bar, box, pie, density, heatmap, volcano, network, Venn, pairs
- Statistics: correlation, t/z/chi-square tests, ANOVA, multiple-testing correction, PCA, multidimensional scaling
- dplyr: filter, select, arrange, group_by, summarise, chaining
- Bioconductor introduction/installation; FASTA import/export, reverse complement, GC content; statistical analysis and advanced plots

Bioinformatics and cheminformatics curriculum detail

- **Foundations:** biological information, protein/amino-acid properties and structure, protein purification, post-translational modification, trafficking, chemical structure notation and viewers.
- **Databases:** nucleotide and protein primary/secondary databases; GenBank/EMBL/DDBJ; PDB/NDB/MMDB; UniProt, Prosite, SCOP, CATH, KEGG and other listed resources.
- **Sequence work:** gene/ORF prediction, primer design, restriction sites, BLAST/FASTA, sequence alignment, gap penalties and scoring matrices, multiple alignment, phylogenetics.
- **Structure work:** DNA/RNA secondary structure, protein prediction by homology modelling/threading, binding pockets, model evaluation, validation, visualisation, Ramachandran plots.
- **Drug design:** molecular mechanics, force fields, quantum/semi-empirical calculations, energy minimisation, molecular dynamics, pharmacophore generation, ADME, QSAR, target identification, ligand design, docking, de-novo methods, and virtual screening.
- **Practical tools named:** the syllabus references tools such as BLAST, FASTA, ClustalW, Primer3, ORF Finder, MEGA, Phylip, AutoDock/Vina, PyMOL, Chimera, ChemSketch and others. Tool availability and licensing are not guaranteed by this guide.

CADD certificate syllabus: six modules

1. **Basics in drug discovery and development:** known drugs and diseases; the role of drugs in medicine and pharmaceutical chemistry; natural substances as drugs; stages, process, and costs of drug discovery and development; teams and tools involved; computational chemistry; rational approaches.
2. **Ligand preparation and virtual-database generation:** compounds and ligands as drugs; 2D and 3D structures; file formats and conversion; compound sketching; molecular-mechanics and quantum-mechanics representations; force fields, energy expressions, local/global minima, minimisation; virtual small-molecule databases; drug-like properties and Lipinski-rule application.

3. **Target-protein preparation using bioinformatics:** biological data and retrieval; bioinformatics databases; nucleotide databases including EMBL, GenBank, and DDBJ; protein sequence databases including Swiss-Prot/TrEMBL; amino acids and protein classification; primary-to-quaternary structure and folding; PDB/RCSB; sequence/structure relationship; Needleman–Wunsch and multiple sequence alignment; homology modelling, loops, turns, side chains, model refinement, threading, comparison of modelling strategies, and active/binding-site analysis.
4. **Virtual-library screening and structure-based drug design:** protein and ligand preparation; binding-site analysis and important amino acids; known-compound docking to understand binding patterns; virtual-library docking with standard and precision methods; interaction profiles; docking-score analysis and filtering; docking of top compounds; selection of compounds for biological screening.
5. **Virtual-library screening and ligand-based design:** active-analogue approach; the page says “patent bursting”; substructure, bioisostere, and similarity screening; 2D/3D pharmacophore generation and screening; SAR/QSAR introduction; ADMET models and screening; introductory AI/ML applications in drug discovery and development.
6. **Practical sessions:** the page specifies 10 practical hours covering ACD/ChemSketch, a molecular editor/viewer (printed as “CSFChimera”), biological and small-compound databases, 2D-to-3D conversion, homology modelling, molecular docking, virtual screening, and substructure/similarity screening.

Separate laboratory syllabi

Laboratory	Topics itemised on the syllabus page
Microbiology	Equipment familiarisation (BSL-II biosafety cabinet, laminar-flow equipment, autoclave, incubator, hot-air oven); sterilisation; bacterial/fungal subculture; Gram and acid-fast staining; spread, pour, and streak plates; pure-culture isolation; biochemical tests; media preparation; inoculation; bacterial growth curve; bacterial isolation and identification; haemocytometer; industrial fermentation processes; antibacterial and antifungal activity; biofilm assay; minimum inhibitory concentration (MIC).
Biochemistry	Thin-layer and column chromatography; enzyme estimations; qualitative/quantitative protein and enzyme analysis; UV spectrophotometer; colorimeter; pH optimisation; SDS-PAGE; protein purification; standard curves; agarose gel electrophoresis; ELISA reader; IC50 calculations for binding assay.
Molecular biology	DNA and RNA isolation; plasmid DNA isolation; agarose gel electrophoresis; primer design; PCR optimisation; PCR; gradient and multiplex PCR; gel electrophoresis with ladder; bioinformatics tools for primer design; SDS-PAGE; plasmid restriction digestion; DNA/RNA/protein quantification; chromatography; biomarkers; statistical analysis (example: EpiInfo).

Published eligibility and training features

Eligibility text in older course tabs includes candidates with relevant B.Sc./M.Sc. backgrounds in biological science, medical science, chemistry, botany, zoology, pharmacy, agriculture, biochemistry, biotechnology, molecular biology, medicine, and related fields. A broader bioinformatics eligibility section includes UG/PG/Ph.D. students, faculty and scientists in biotechnology, life, medical, pharmaceutical and chemical sciences, plus relevant R&D industry professionals.

- Individual attention and hands-on practical training are promoted.
- Teaching with commercial software is mentioned.
- Guest faculty from universities/organisations may be arranged.
- Limited batch sizes, online classes, and weekend classes are listed.
- Placement assistance is mentioned for worthy candidates; no guarantee or terms are stated.

> **Historical course figures, not current quotations.** Older course tabs show examples including Cheminformatics: one month / Rs 12,000; Bioinformatics: three months / Rs 30,000; Immunoinformatics: three months / Rs 30,000; Genomics and Proteomics: 20 days / Rs 7,000; Docking: 20 days / Rs 5,000; Drug Design: 20 days / Rs 8,000; Virtual Screening: two weeks / Rs 5,000; Genetic Engineering: two weeks / Rs 8,000; Molecular Biology: one week / Rs 7,000; Basic Microbiology: 15 days / Rs 7,000; Advanced Microbiology: three weeks / Rs 10,000; Biomarkers: 10 days / Rs 8,000; and R Programming: 21 days. These are old website entries, not confirmed 2026/2027 prices or schedules. Ask Ciencia for current fees, eligibility, delivery mode, batch dates, and syllabus.

9. Scientific Writing and Documentation

The Scientific Writings page describes guidance for researchers and scholars at different stages of life-sciences research. It frames scientific writing as clear, simple, well-organised communication, and says support may be combined with data analysis, statistics, and bioinformatics.

Services listed

- Journal-publication writing assistance
- Government funding and grant proposals, including DST and DBT
- Thesis-writing assistance
- Research documentation and project support
- Data review and analysis, biostatistics, and bioinformatics
- Academic writing, editing, statistics, and bioinformatics guidance are referenced as team capabilities

The page says work can be taken up ad hoc, with writing aligned to selected journal or funding-agency instructions and timelines. It describes familiarity with international reporting standards. Scope, authorship, data responsibility, journal policies, deadlines, and deliverables should be agreed directly with the service team.

10. API Pharma Intellectual-Property Services

The Patent page presents services for the API Pharma sector. It lists both search/report work and filing/prosecution/maintenance support.

Search and analysis services

- Product snapshot
- Patent landscape report
- IP clearance report
- Freedom-to-operate (FTO), infringement analysis, and clearance report
- Patentability report
- Invalidity/opposition report
- Identification of non-infringing options

Filing and prosecution services

- Patent drafting
- Filing Indian patent applications
- Filing WIPO Patent Cooperation Treaty (PCT) applications
- Prosecution and examination support
- Preparing and filing oppositions
- Patent maintenance

Product snapshot elements listed

Chemical name; structure; CAS number; dosage form and strength; approval information in the US, Europe (EP), and India (IN); DMF filer list; CEP filer list; Orange Book patents; polymorphic information; marketed versus targeted form; possible prior-art route-of-synthesis suggestions; and an IP conclusion.

How selected reports are described

- **Landscape:** searches across databases using product and IUPAC-name keywords; identifies relevant global patents/applications, disclosed synthetic schemes, and legal status. The prose says a minimum of about 20–25 days; the table says 20–30 days.
- **IP clearance:** examines a customer-provided route for potential infringement in a specified geography and describes a country-specific non-infringement opinion.
- **FTO/infringement:** claim-based analysis of valid patents/applications in a particular country, generally described as work before a product launch.
- **Patentability:** assesses novelty, inventive step, and industrial applicability as described on the page; obtain professional advice for the applicable jurisdiction and facts.

Service	Indicative duration shown on website
Product snapshot	5 days and 15 days appear as separate entries for the same service; the site does not explain the difference.
Patent landscape report	Minimum 20–30 days in table; prose says minimum 20–25 days.
IP clearance report	10 days

Service	Indicative duration shown on website
FTO/infringement/clearance report	10 days
Patentability report	10 days
Identifying non-infringing options	5 days
Patent drafting	10 days after receiving data
Indian patent filing	2 days
WIPO PCT filing	2 days
Prosecution/examination	10 days
Preparing and filing oppositions	15 days
Patent maintenance	Same day

> **Timing and legal-scope caution.** These are website-indicated processing durations, not legal-office timelines or a guarantee of completion. Confirm the specific deliverables, jurisdictions, data requirements, legal review, fees, and schedule in writing. This guide is not legal advice.

11. Laboratory Facilities and Equipment

The Facilities page describes doctoral-faculty teaching, dedicated staff, laboratory equipment, and bioinformatics/cheminformatics information technology for research analysis. It says some facilities are available for commercial testing and consultancy and that facilities are continually updated.

- ELISA reader
- Conventional PCR
- SDS-PAGE
- UV transilluminator
- DNA electrophoresis/separation equipment
- Spectrophotometer
- Fermenter
- Soxhlet apparatus (the page spells this “Soxhleter”)
- Water-purification system
- Microcentrifuge
- Clinical centrifuge
- Gel-documentation facility
- Biosafety cabinet
- Laminar-air-flow system
- Bacteriological incubator
- Colony counter
- Inverted phase-contrast microscope
- Incubator shaker
- Autoclave
- Loop sterilizer
- UV-visible spectrophotometer
- General laboratory equipment
- Microbalance
- Hot-air oven
- pH meter
- Quick-spin equipment
- Magnetic stirrer
- Vortex mixer
- -80°C/-20°C freezers
- Dry bath
- Water bath
- Bioinformatics software

Equipment availability, booking, access, safety induction, sample acceptance, and commercial testing scope should be confirmed directly before planning work.

12. Registration and Enquiry Process

Online enquiry form fields

The registration page asks for candidate name, father/husband name, date of birth, qualification, college, phone, email, course of interest, whether the enquiry is for training/project/both, communication address, PIN, and how the candidate heard about Ciencia. Name, phone, email, course, and enquiry type are marked required in the web form.

Courses offered in the form

Microbiology; Molecular Biology; Bioinformatics; Immunoinformatics; Cheminformatics; Analytical Chemistry; Genomics and Proteomics; Docking; Genetic Engineering; Drug Design; Virtual Screening; Biomarkers; R Programming; Computational Aided Drug Designing; and another life-sciences project or training.

Published registration steps

1. Select the service and submit the enquiry/registration information.
2. The registration page says candidates pay 20% of the fee to complete registration for selected services.
3. After payment, the page instructs candidates to send the enquiry form with a scan of the payment receipt and a college identity card or other student identity proof.
4. Contact Ciencia to confirm the payee, payment instructions, current fee, and submission address before transferring funds. The current page does not publish bank account details.

The site's enquiry form prepares an email in the visitor's mail application for review and sending. It also links to a downloadable registration form and an external Google Form.

> **Payment safety:** confirm all payment details directly through the official contact channels before paying. Do not rely on old embedded or copied payment instructions.

13. Careers

The careers page welcomes speculative enquiries from people with relevant qualifications (including a master's degree in life sciences), appropriate experience, and/or a similar industry background. It describes a recruitment approach intended to be systematic and to promote equality of opportunity. The site does not list specific current vacancies.

Application instruction: send a CV to ciencialifescience@gmail.com. This career-specific address is singular (“lifescience”), unlike the general enquiry address, which is plural (“lifesciences”). Confirm the correct address if a message is returned.

14. Contact, Location, Hours and Online Channels

Organisation	Ciencia Lifesciences / Ciencia Life Sciences
Postal address	Sardarpatel Nagar, Nizampet X Roads, Kukatpally, Hyderabad, India 500085.
Telephone / WhatsApp	+91 8247307129 +91 9966239797
General email	ciencialifesciences@gmail.com
Career email shown	ciencialifescience@gmail.com (singular; confirm if it fails)
Website	www.ciencialifesciences.com
Working hours	Monday–Saturday, 9:30 am–5:00 pm; Sunday closed.
Social links	Twitter/X link shown as twitter.com/cienciajournals; Facebook link shown as facebook.com/cienciajournals.

For visits, confirm appointments and access arrangements first. For course, project, research, writing, or IP enquiries, the contact page directs visitors to use the contact channels or registration form.

15. Website Notices, Discrepancies and Verification Notes

- **2027 internship:** the homepage promotion reads “2027 SUMMER INTERNSHIP” and links to certification and laboratory syllabi. It provides no 2027 start date, fee, confirmed schedule, or current batch details.
- **2025 news:** the homepage still contains news dated 14 May 2025 and older announcements, including course batches and a 2018 notice. These are historical notices, not proof that those batches are open now.
- **Course prices and duration:** many values are embedded in older course tabs. They are reproduced as historical website listings in this guide and must be reconfirmed.
- **Patent turnaround times:** product snapshot appears twice with different durations, and landscape durations differ between the table and prose.
- **Contact email:** general and careers pages show different email spellings (plural versus singular “lifescience”).
- **Registration:** the current page describes a 20% registration payment for selected services but does not give bank details. Verify the amount, recipient, and method directly before payment.
- **Page wording:** some source pages contain spelling, terminology, and duplicated course content. This guide normalises obvious spelling for readability while preserving the intended topic; it does not independently validate scientific claims, course accreditation, outcomes, or service capacity.
- **Scope:** “complete” here means a detailed consolidation of information visible in the website pages reviewed, not an audited company record or independent verification of every claim.

16. Source Pages

This guide is based on the active root-level website pages and their published text as reviewed on 15 October 2026. The source pages are:

- Home
- About Ciencia, founder, and advisory board
- Research projects and subject areas
- Training programmes and detailed course tabs
- Bioinformatics, cheminformatics, and immunoinformatics
- CADD and laboratory syllabi
- Research services and techniques
- Scientific writing support
- API Pharma IP and patent services
- Laboratory facilities
- Registration and enquiry
- Careers
- Contact and location

> **For latest information:** contact Ciencia directly at +91 8247307129 or ciencialifesciences@gmail.com, or use the registration page. Confirm course dates, fees, eligibility, formats, availability, facilities, deliverables, confidentiality terms, and IP timelines before making commitments.
